

## CANOLA OIL

- 1) Used as a lubricant, fuel, soap and synthetic rubber base as well as an illuminant for slick color pages in magazines.
- 2) It forms latex-like substances that cause red blood corpuscles to clump together.
- 3) Its real name is RAPESEED OIL, renamed, CANOLA OIL, (Canada Oil) for obvious reasons. It's one of the main crops grown in Canada where it is being field tested. It's grown in the United States as well.
- 4) Rape Oil was widely used in animal feeds in England and Europe between 1986-1991 but no longer is used because of the animals that went blind and mad ('MAD COW DISEASE').
- 5) Experts agree that the effects of ingested Rapeseed Oil take at least 10 years to manifest - so not to be concerned.
- 6) Rapeseed is a member of the mustard family, one of the most toxic of all plants, and is shunned by insects.
- 7) Mustard gas, which was banned in war because it blisters lungs and skin, is made from rapeseeds.
- 8) Irradiation (!) is used to turn the rapeseed oil into acceptable Canola Oil??

Olive oil comes from olives, peanut oil from peanuts, sunflower oil from sunflowers; but what is a canola?

Canola is not the name of a natural plant but a made-up word, from the words "Canada" and "oil". Canola is a genetically engineered plant developed in Canada from the Rapeseed Plant, which is part of the mustard family of plants. According to AgriAlternatives, The Online Innovation, and Technology Magazine for Farmers, "By nature, these rapeseed oils, which have long been used to produce oils for industrial purposes, are... toxic to humans and other animals".

Rapeseed oil is poisonous to living things and is an excellent insect repellent. I have been using it (in very diluted form, as per instructions) to kill the aphids on my roses for the last two years. It works very well; it suffocates them. Ask for it at your nursery. Rape is an oil that is used as a lubricant, fuel, soap and synthetic rubber base and as a illuminate for color pages in magazines. It is an industrial oil.

It is not a food.

Rape oil is strongly related to symptoms of **emphysema, respiratory distress, anemia, constipation, irritability, and blindness** in animals and humans. Rape oil was widely used in animal feeds in England and Europe between 1986 and 1991, when it was discontinued .

### **A few relevant facts**

It is genetically engineered rapeseed.

Canada paid the FDA the sum of \$50 million to have rape registered and recognized as "safe". (Source: Young Again and others)

Rapeseed is a lubricating oil used by small industry. It has never been meant for human consumption.

It is derived from the **mustard family** and is considered a toxic and poisonous weed, which when processed, becomes rancid very quickly.

It has been shown to **cause lung cancer** (Wall Street Journal: 6/7/95)

It is very inexpensive to grow and harvest. Insects won't eat it.
